

## Power Line Carrier:

## PLC

Power Line carrier system is the latest technology in automotive data transfer system, instead of using radiowaves or individual cables, PLC uses the original power cabling of the vehicle to transfer data between detecting sensors and the main display unit.

## Completely Interchangeable

Any truck which has parkmatic PLC mounted can use any trailer that has PLC sensing system installed without any further installation required. Just connect the standard power and brake lines and you are ready to go.

## e mark approved

E mark approved product from an iso9001-2000 certified company

# Perfection

Without Cables or RF.

Parkmatic presents you the perfect solution for vehicles that installation of parking sensor systems are either hard or impractical.

Now with Parkmatic PLC it is both easy to Install and easy to operate.

# Commercial Vehicles Sensor System

## System Features

0.22m	Min.Display Distance
1.70m	Sensitivity Levels
	Fast Response
	Rear Tow-bar Bypass
	Diagnostic Mode
	Sensor Repaintable
Bi.....	Rear Warning Mode
	Parking Line Adjustment

## Innovative Solution For Truck

### Caravan or bus with / without a trailer

This model is specially designed for long vehicles, such as trucks (lorries), caravans and buses, with or without trailers / containers.

#### FEATURE:

- Very reliable wireless transmission between the ECU and display.
- Truck & Trailer Exchange: Easily swap trucks and trailers equipped with the same ECU / sensors & display unit.
- The display unit can work with a number of ECU / sensors of the same model. The perfect solution for companies with a multitude of trailers / containers.
- Uses digital sensors with extra wide horizontal angle and very high sensitivity, which is adjustable.
- ECU / Sensors are totally waterproof.
- Meter/Inch switchable.
